Cermatpro CerSett PB Series
Date Issued: July 2015

Data Sheet no: CSPB01
Number of Pages: 1

Data Sheet

CerSett PB Products for the Construction Industry

A series of closely controlled binder mixes for use in the production of rapid repair mortars and grouts.

CerSett PB grades are stabilised blends of MAP with MgO which have been optimised to give consistent setting times and crushing strength development in rapid repair mortars. Close control of this bond eliminates variation in customers' formulations and allows the elimination of a number of raw materials from a typical production mix. Due of this close control, CerSett PB will often give the required strength at lower levels of addition than is used with separate ingredients. Available in 25kg plastic lined heat-sealed bags, plastic buckets or 1 kg plastic bottles.

Packaging

Available in 25kg plastic lined heat-sealed bags.
